This happened in Worcester, where I was working on a newspaper from nine o'clock in the forenoon to three o'clock the next morning, seven days in a week, with an allowance of five minutes for meals, includ-2:00p. m. ing a piece of mince pic at one a. m. knew that this dream contained warning, and at first I thought it referred to the pie. But on second thought I decided to throw up my job. I did it, and have never dreamed the same thing since, which makes it look

like a plain case to me. When I think of my existence there, it seems natural that I should never have been warned again. A man cannot reasonably expect Providence to do too much for him. A favor of that size should content him for life. However, it has been hard for me to listen to so many nice ghost stories and reflect that I have never enjoyed any thing of the sort myself. It has been some consolation to investigate, by my own scientific method, the experience of others.

Here is a case which I wouch for. I became acquainted while in Boston with an aged victim of the game of every face-card in the deck. policy. It is a game in which a man can bet one cent if he has no more, and the person to whom I refer had even lost his self-respect. He was a great believer in dreams, and his stories of what they had done for others were worth much more than the small sums which I bestowed upon him from time to time. As he always went to bed hungry, he never lacked dreams. The only trouble, as he explained to me, was in the interpretation. For instance, he would dream of a death. and then play the dead "gig." 9-19-29, "when," as he would inform me, after the drawing, "any cussed fool ought to have known that the coffin gig was Sealed bids will be received at this office until 5 o'clock p. m., Nov. 26, 1894, for the construction of the unfinished sidewalks

the right one for that dream.' One day ! found him in luck; and also somewhat in liquor.

This triffing inaccuracy reminds me ADVICE TO MOTHERS.

This trifling inaccuracy reminds me of the difficulty experienced by a ghost always be used for children teetining. It which appeared in my father's house a good many years ago. It awakened us all pairs, cures wind colle, and is the best good many years ago. It awakened us all in the dead of night by playing on the points. Used by additions of mothers.

This trifling inaccuracy reminds me of the difficulty experienced by a ghost which appeared in my father's house a good many years ago. It awakened us all in the dead of night by playing on the most comprehensive grasp of the bottle. Used by additions of mothers.

This trifling inaccuracy reminds me of the difficulty experienced by a ghost war.

It must not be supposed that the balloon which by means of all its pump, the air could be comprehensive grasp of the difficulty experienced by a ghost which appeared in my father's house a given the balloon in which one of all the persons cognized that the balloons which are thus made to order for any nation embody in them the best results attained by the research. I always constant the balloon there was contained a smaller balloon in which one of all the persons cognized that the balloons which appeared in my father's house a given the balloon there was contained a smaller balloon in which one of all the persons cognized that the balloons which appeared in my father's house a given the balloon in which one of any nusual happening has believe the most powerful imagination and the most powerful imagination and the most powerful imagination and the most powerful imagination.

The balloon there was contained to the balloon there was contained as the balloon there was contained to a little pump, the air could be always to any the proposed that the balloons which are through the most powerful imagination and the most powerful imagination and the most powerful imagination and the most powerful the mos ural music in horror, as the others did, too, no doubt. My musical ear is good, Exchange stables at Orlando and Sim and it is exceptionally accurate in the matter of absolute pitch. Such being the case. I was soon able to make out that the ghost's tune consisted of only two notes, high C and A way down in the bass.

"This means something," said I, in an awed whisper. "C. A. must be the in-Itinis of the ghost."

Then I rose and followed my father down to the parlor, where we found our cat (previously supposed to have wandered away and died standing on the keys of the piano. She had her left hindfoot on C. her right forefoot on A, and was reaching out after T. Nothing but the system of musical notation prevented her from revealing her identity completely. My father drove her away, and she never came back, which is good ground for believing that It was not the cut at all, but her ghost

Another case even more remarkable fon this occurred on the banks of the St. Lawrence this summer.

A lady whom we will call Mrs. A., because that will make it easier for the Society for Psychical Research to enter this story on its records, had gone to Pallman Palace Sleeping cars morning a great passion for outdoor sports, and, and ingut. It is the only line offering the agreed passion for outdoor sports, and. In fact, sports of any kind. Mrs. A retired to rest on the night of August 13, tolly Taket office, No. 15 North Main st. this region with her husband who had Pre-enger Station, corner Douglas are believing that her husband was then and Fifth ave.

And she dreamed a dream. She be-beld her husband and old Abe Grover, Howard Fielding Solicits Orders the river pilot, coming down through the rapids in Abe's boat. The waters whirled around them madly, and Abe So Always Carrise a Full Stock of Ghosts, grew white around the gills. He caught a crab with his starboard oar, and the boat turned a-dozen flip-flops in the hurrying tide. Mrs. A. beheld her husband struggling with the current She was conscious of making frantie I have always been deeply interested efforts to reach and save him, probably in supernatural phenomena. Even remembering that he had money in his when quite young, I could never walk clothes, although she does not tell the by a cemetery after dark without bestory that way.

ing disappointed. No ghost ever ven-In the midst of these struggles she tured out of his cage when I was lookaw 'te. The dream still ran riot in her ing.
In the matter of visions, warning in min I. It was certainly a warning. Her husband was in peril. dreams, etc., I have been equally un-

Mrs. A. was so deeply moved by these reflections that she arose, dressed herself hastily, curled her front hair and sped through the darkness to the cabin of Abe Grover, which stood on the river bank not far from the cottage in which Mrs. A. had dreamed her dream. Nobody knows what she intended to do Probably she wished to weep with Mrs. G., and to ask her how she thought that she (Mrs. A.) would look

There was a bright light in one end of Grover's cabin, while the other was dark. Mrs. A. precipitated herself (as they say in French novels) against the door of the lighted room. She landed almost in the middle of the floor. Her eyes took in the scene at a glance. Four men sat around a table. There were eards and chips and "bait" in large, black bottles.

Mr. A. sat behind an ace-full, and he had just tooted old Abe, that guileless countryman, to the extent of the limit. Mrs. A. seized her husband by the upper flapper of his right ear, and led him gently homeward. And when they were gone, Uncle Abe

PORTRAIT OF MR. A

that drew tears of sympathy from In the category of remarkable rescues attributed to dream warnings, I think this adventure stands at the very head.

One more remarkable case was recently brought to my attention. Mr. B., a man of the most unimpeachable veracity, was awakened one night by three loud raps on the head board of his bed. These raps, he tells me, were unquestionably due to spiritual agencies. The fact that the back of his head was sore all the rest of that week is a mere coincidence.

Just as Mr. B. struggled out of sleep into consciousness, he heard a voice say: "Charley is dead." Now, this happened in New England, where Charley is so common a name that many, omewhat in liquor.

"I hit it this time," he said. Zimri. Therefore, Mr. E. was not spoken than before. He rapidly ran

Five Miles the Limit to Man's Flight-A Balloon Which Carries Five Men with Boats, Sledges and Dogs.

(COPYRIGHT, 1804.)

Visitors to Paris who have not been content to follow the beaten track of sight-seeing may have noticed on the western side of the Champs de Mars a row of odd-looking sheds. There is nothing attractive about the appearance of these sheds. They might be the stables of a street-car company, or the coverings of a rope-walk, or a series of abandoned breweries. There

VIEW OF THE ASCENT OF MR. LUNARDI'S CELEBRATED AIR BALLOON FROM

are no signs of horses, however, the sheds are not large enough to form a rope-walk, and instead of the scent of ops and malt characteristic of a brewery, there is always an unpleasant odor of gas and varnish hanging around the place. On certain days in the week angry mammoths. If the visitor is of sel can be directed upon water."

the cage were passed through a sort of was acquired which rendered it posible for the air ship to respond to the government of a rudder placed at one end of the balloon and formed of a wooden frame covered with thin cloth. The motive force was given by a small three horse-power steam engine weighing about three hundred and thirty pounds. The engine turned a three-branched screw about three and a half yards in diameter at the rate of one hundred and ten revolutions per minute. The courage of the aeronaut who was willing to risk his life in a voyage through the air with a blazing furnace suspended a few yards below a balloon containing thirty-one hundred cubic yards of an inflammable gas must have been immense. Every precaution was taken to guard against danger The furnace was inclosed in a specially constructed case and the chimney was conducted downward through the floor of the cage. The experiment was crowned with success, although no attempt was made to beat against the wind. "The strength of the machine," said Giffard, "was not great enough to warrant me in trying; indeed I never thought of the matter in that connection. All that I wished to do was to perform several maneuvers in swerving to the right and to the left just as inclination prompted The next important step in the same

cent in La France on August 9, 1884. This balloon was constructed, under the direction of the two officers, in the workshops attached to the military establishment at Chalais-Mendon, and with the utmest doeslity in full view of thousands of people who cheered the venturesome aeronauts enthusiastically. In his account of the trial trip, attained an altitude a little superior te the wooded plateaus of the Chalais valley, we started the screw and had the satisfaction of seeing the balloon obey immediately, and reply in the most satfrom a straight course indicated by the rudder. We felt that we were absohuge brown spheres show themselves lutely masters of the vessel, and that above the palisade and surge to and | we could steer a course in the air as fro as though they were the backs of easily and as normal cuty as a steam resan inquisitive turn of mind he will voyagers proceeded as far as Villalearn upon inquiry that this is the coublay, about two miles from Chalais. home of the military balloon-the place | There they turned off in the direction in all the world where the best bal- of Petit-Bicetre, from whence they reloops for the purposes of war opera- turned to their starting point. sulted in developing them to a point of perfection which makes them a powdirection was taken when Capt. Renard er that will have to be seriously taken into account in the next war. Strange battles may even be fought in the air by bostile balloons. As Giffard said: "I see the air ensanguined by war as the waves and the plains have been." The military balloons will surely carry dynas for some considerable time maneuvered mite bombs and deadly explorives, which they will shower down upon the buildings and people lying belpless three or four miles beneath. They will be fitted with powerful search lights Capt. Renard says: "As soon as we had so that night attacks will become an impossibility. In thousands of ways they will be utilized either directly or indirectly in the destruction of human life, and the horrors of war will be augmented by the hopelessness of trying to guard against the attacks of an serial enemy. It is much pleasanter to think of this.

assistance the balloon may be in the field of astronomical and meteorological discovery and investigation. In France it is already not uncommon for astronomers to use balloons when thick clouds obstruct the view, making it impossible to take-important observations. On one occasion Camille Flammarion rose to a height of thirty-three hundred yards, taking a small telescope with him to observe an eclipse from above the clouds. knows what the belloon may enable scientists to discover in the subject of meteorology? By its means the secret of the physical construction of the upper atmosphere may be dis closed. The variation of the pressure its temperature, the formation of storms, hurricanes, electricity, the mysteries of the solar radiation may be made as clear to us by the help of Montgolfier's invention, as some of the secrets of organic life have been disclosed under the microscope. Perhapt the north pole may be reached in a balloon. The question has been mosted, and may be carried out in the near future. A balloon with a cubic contents of fifty thousand feet and capable of lifting twenty tons, furnished with a number of smaller balloons containing a reserve supply of hydrogen.

one hundred cubic feet of gas. Inside

It was that it was shaped like a huge

promise of success. The balloon would carry five men with baggage, provisions for eighty days, a number of Esquimaux dogs, several boats and a large sledge. It is calculated that conservative China has decided to add the motor in this case was no conservative China has decided to add the motor in this case was not conservative. from Spitzbergen, where the trip will begin, the air currents which blow ing only two hundred and twenty pounds. This latter condition was realsteadily from the south will carry them across the Arctic circle and directly ly a drawinch, as everything was over the north pole in a flight of about sacrificed to setain lightness, with the four days' duration. Thus, instead of consequence that it was impossible to assisting to destroy haman life, the carry along sufficient fuel for a lengthmilitary balloon may be the means of the discovery of a new continent, prov-ing once more that "the glory of a ened journey without-overweighting the balloon.
